

# A 360-degree view of your hospital in real-time

Things change fast in a hospital. A good performing ward can quickly become blocked, readmissions can increase and patient wait times can soar, creating issues in safety, efficiency and performance.

Being able to predict or see these changes as they happen allows you to act, instantly. Miya Patient Flow is a real-time patient journey solution that provides full visibility of your hospital for simple care coordination, risk and task management at every level.

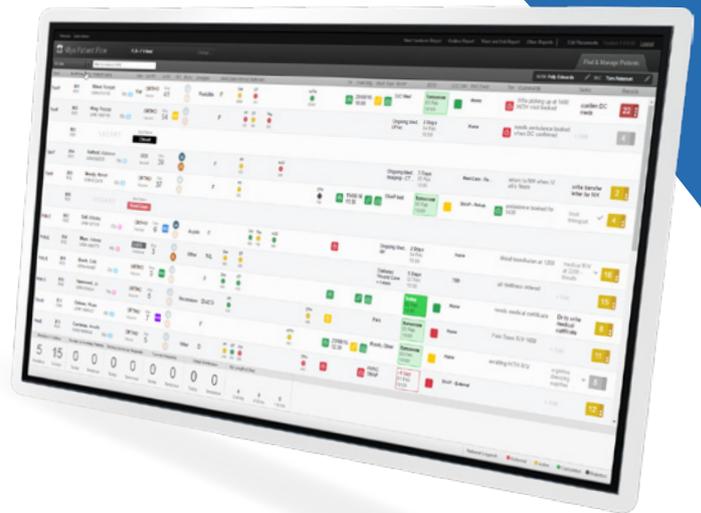

## Bed management made easy

Improve hospital efficiency and utilisation of resources with real-time metrics that take the guess work out of planning and tracking patient journeys. With Miya Patient Flow you can see who is coming, going or staying in one view, with Hospital at a Glance (HaaG), making it simple and fast to see the information that matters, such as:

- > Ward occupancy and capacity
- > Outliers from other specialties
- > Patients occupying un-resourced beds
- > Expected discharges
- > Extended length of stay
- > Expected ward admissions

## Dashboards that meet all your clinical staff needs

Give your clinical and operations staff the information that they need to deliver the best patient care with specialty specific dashboards, ward snapshots and hospital overviews. Our unique drag and drop functionality allows you to control what metrics you see, so you have visibility of the relevant information needed to ensure the best possible patient outcome.

Dashboard metrics can be configured to show key hospital targets including risk thresholds and current state of a ward, specialty unit or ED, in real-time.

## Analytics that add value to patient care

Miya Patient Flow is built on Precision, Alcidion's next generation health analytics platform which is based on FHIR and open standards. Miya Precision comes with thousands of pre-configured metrics across hospital operations, patient information, clinical risk and specialty specific metrics that can easily be embedded into clinical workflows.

This powerful platform takes our patient flow solution to the next level with real-time information, at the point of care, giving not just clinical staff but operations staff the ability to make the right decision, at the right time to deliver the best care, hospital wide.
