University Hospital Southampton NHS Foundation Trust procures Miya Precision for EPR

- Agreement signed with University Hospital Southampton NHS Foundation Trust (UHS) to implement Miya Precision as the foundation for their Electronic Patient Record (EPR)
- Initial implementation will include the Miya Access, Command, Emergency and Flow modules
- The agreement will see Alcidion partner with UHS to deliver a modern, modular EPR using a combination of Alcidion and UHS incumbent products
- Initial Total Contract Value (TCV) of \$2.8M over 3 years with additional options to add all Alcidion products resulting in a possible contract value of \$13.8M if all options are exercised for 4 years
- Increases NHS penetration with at least one Alcidion product now in 40 NHS Trusts whilst further establishing the first implementation in a new Integrated Care System (ICS), Hampshire and Isle of Wight
- Further validates Alcidion's modular strategy which enables customers to maintain, rather than replace, existing technologies and progressively build an EPR with a shorter period to realising benefits

Melbourne, Victoria – Alcidion Group Limited (ASX:ALC) today advises that it has signed an initial 3 year agreement with University Hospital Southampton NHS Foundation Trust (UHS) to implement its Miya Precision platform. As part of the agreement, Alcidion will partner with UHS to deliver a modern, modular EPR, using a combination of Miya modules and UHS incumbent products.

In addition, Alcidion will become a supplier of some of UHS's intellectual property, including the Hospital Integrated Clinical Support System (HICSS), which manages the scheduling and reporting of endoscopy procedures.

The initial contract value is \$2.8M over 3 years covering the implementation of Miya Precision, together with Miya Access, Miya Command, Miya Emergency and Miya Flow modules.

The contract includes options to take up additional Alcidion modules, including the Patient Administration System (PAS), as UHS builds a Modern Modular EPR which will result in significant growth of the overall contract value. If all options were taken up the total contract value could reach \$13.8M over a four-year period.

The addition of UHS increases Alcidion's UK NHS market presence to 40 Trusts or approximately 28% of the acute market with at least one Alcidion product implemented. Furthermore, UHS sits within the Hampshire and Isle of Wight ICS which will be the first time Alcidion has implemented their solution in this ICS.

UHS is one of the largest acute teaching trusts in England, with over 1000 beds and employing approximately 13,000 staff. Well-known and highly regarded for its innovative electronic patient

record (EPR) strategy and in-house development of IT systems, UHS will use the Miya Precision platform to introduce real-time care management tools that complement its long-standing approach to digital innovation. It will also gain access to a modern integration platform, with support for coding and open messaging standards, that can be used to deploy Alcidion's modules and further drive innovation.

Lynette Ousby, UK Managing Director for Alcidion, said: "UHS Trust is well-known as a health tech leader, so we are delighted it has chosen the Miya Precision platform and our smart clinical tools to take its digital maturity to the next level."

Group Managing Director and CEO Kate Quirke added: "Our relationship with UHS is focussed on a long-term partnership and reciprocal agreement. With a strong reputation as a digital exemplar, I look forward to seeing the impact of this latest stage of the trust's program, and to further developments in the near future."

"As the NHS continues to deploy technology at pace, it is important to continue to listen to what IT, clinical and operational teams need. Doing that effectively requires flexibility from technology providers and a willingness to work together. It is rewarding to see the benefits of a modern, modular approach to digitisation working so well in practice."

UHS was recognised by NHS England for its success in 2016, when it was awarded a place on the global digital exemplar program. More recently, it was put into the second of four trust groupings by the frontline digitisation program that has been established to 'level up' hospital IT.

About Alcidion

Alcidion Group Limited (Alcidion) has a simple purpose, that is, to transform healthcare with proactive, smart, intuitive technology solutions that improve the efficiency and quality of patient care in healthcare organisations, worldwide.

Alcidion offers a complementary set of software products and technical services that create a unique offering in the global healthcare market. Based on the flagship product, Miya Precision, the solutions aggregate meaningful information to centralised dashboards, support interoperability, facilitate communication and task management in clinical and operational settings and deliver Clinical Decision Support at the point of care; all in support of Alcidion's mission to improve patient outcomes.

Since listing on the ASX in 2016, Alcidion has acquired multiple healthcare IT companies and expanded its foothold in the UK, Australia, and New Zealand to now service over 400 hospitals and 87 healthcare organisations, with further geographical expansion planned.

With over 20 years of healthcare experience, Alcidion brings together the very best in technology and market knowledge to deliver solutions that make healthcare better for everyone.
